

## KRE KARVER CLAMP : 2 IN 1

### 1 CLAMP + 1 THIMBLE

Spinnaker furlers need anti-torsion as a link between the drum and the swivel but also as a furling support for the sail. This anti torsion rope have to be adjusted to the correct length.

The hardness and the positioning of the fibers of this rope do not allow splicing and makes it very difficult to sew. The clamp remains the simplest solution to implement.

The KRE clamp offers a simple installation, fast, without heavy tools and offers the possibility of a "blank" installation before cutting the rope to its final length.

- VERY EASY TO INSTALL
- PLACING THE ROPE WITHOUT ANY LOOP
- SIMPLE TOOLS: ALLEN KEY + ROPE CUTTING TOOL
- VERY FAST INSTALLATION (5 to 10 MN)
- ADJUSTMENT WITH EASY EDGE
- INCORPORATED THIMBLE
- COMPATIBILITY WITH OTHER BRANDS (PROFURL, ...)
- ALUMINUM ANODIZED CLAMP
- 3 SIZES AVAILABLE

Reference	Model	Best rope	MWL
PF104710	<b>KRE1</b>	10-11 MM	500 kg
PF094806	<b>KRE2</b>	12-13 MM	1 000 kg
PF084921	<b>KRE5</b>	14-15 MM	1 500 kg
